WHAT IS NEW

ASTRA® BDS and Phenyl-Hexyl HPLC columns

New ASTRA® HPLC columns are complementary to our ARION® brand. These columns offer not only a high-endcapped C18, C18-BDS and Phenyl-Hexyl-HE phases, but also a unique DM phase with dual modification. Another novel phase C18-AQ offers dual chemistry bonding for analyses in aqueous mobile phases. See page 54.

ARION® HPLC columns and Guard system

We have extended range of ARION® HPLC columns with the PFP phase. New ARION® NH₂ cartridges extend the AGS system. See page 50.

LION™ GC columns

The family of GC column LION™ has grown by two stages. LN-624 Sil MS brings with it a higher temperature limit of 300/320 °C, lower background and longer lifetime. New LN-FAME HT is a highly polar bonded phase with an increased temperature limit up to 280 °C, with the application being focused on the analysis of FAME and their cis/trans isomers. See details on page 78.

SpeExtra™ MSPE columns

MSPE filters enable the quick and effective pretreatment of a sample using different types of membranes with 0.22 micrometer porosity and a suitable sorbent. They are a suitable replacement for 1–3 mL SPE columns, tips filled with sorbent and LL type extraction. With MSPE filters you will save time, use a minimum amount of solvents and perform more sample analyses than with conventional SPE columns. See details on page 90.

MetAmino® sample preparation kit

The MetAmino® kit offers an easy sample preparation method for your LC/MS or GC/MS analysis. It has been developed in the Czech Republic in co-operation with Biology Centre CAS. See page 96.

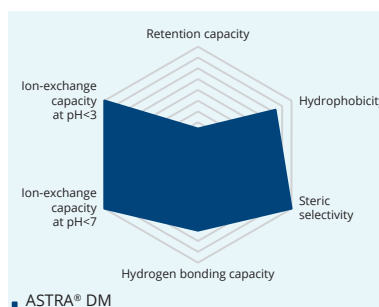

HPLC COLUMN SELECTION

HPLC column selectivity

The selectivity is defined as the capability of stationary phases to separate analytes under certain conditions. The selectivity mainly depends on the structure, metal content and modification of base silica gel, type of chemical bonding or silica gel end-capping. The HPLC column selectivity has been measured according to the Tanaka plots (Tanaka, N. et al., Journal of Chromatographic Science, 27 (1989), 721–728), shown below. This allows users a quick comparison of different phases in order to choose the best possible HPLC columns for their application.

Property	Synonym	Measured parameter
Retention capacity	Hydrophobicity	k' (pentyl benzene)
Hydrophobicity	Methylene selectivity	α (pentyl benzene, butyl benzene)
Steric selectivity	–	α (triphenylene, o-terphenyl)
Hydrogen bonding capacity	Capacity of silanol	α (caffeine, phenol)
Ion-exchange capacity at pH>7	–	α (benzyl amine, phenol)
Ion-exchange capacity at pH<3	–	α (benzyl amine, phenol)

As ARION® is one of the latest objects found in space, so it is also the best workhorse for your applications. Explore our new line of ARION® HPLC columns. What innovations does this column bring to you?

- Strict quality control of alkaline and metal content during the silica gel production.
- Narrow particle size and pore size distribution.
- Unique production process ensuring high lot-to-lot reproducibility.
- Good stability at higher temperatures.

What does ARION® quality look like?

ARION® particles have a very tight distribution and the closest proximity to the shape of a spherical particle ($c=0.9618 \pm 0.0353$). This ensures high separation power and separation reproducibility.

ARION®

Competitor L

Competitor X

Competitor E

SEM HV analysis 20.0 kV, view field 30 µm (by independent laboratory)

The ARION® medium does not include broken or "potato-shaped" particles. The silica spherical shape is unique; both surface uniformity and surface smoothness enable better packing into HPLC columns and therefore paramount chromatography resolution and reproducibility.

Up close

The 5-micron electron microscope field clearly shows the highest quality of ARION® 5µm particles.

ARION® particle 5 µm

Competitor L particle 5 µm

Competitor X particle 5 µm

Competitor E particle 5 µm

Main particle characteristics:

- The closest proximity to a sphere.
- Unique surface smoothness shown in the pictures above.
- Tight particle size distribution.
- No broken particles.
- No presence of clustered particles.
- No "Moon craters or mountains".

Particle size distribution

ARION® particle 1.7 µm

ARION® particle 2.2 µm

Particle size distribution of ARION® 5 µm particles shows a tight profile calculated from ferret figures by SEM.

ARION® column hardware:

- Modern column hardware for easy handling in a narrow space.
- UHPLC grade Stainless Steel with an amazingly smooth internal surface.
- Colour coded fittings.

Circularity

Batch to batch reproducibility

Batch-to-batch reproducibility is shown in the two bar graphs below. The silica batches are strictly controlled and checked for symmetry, and efficiency (number of theoretical plates/meter).

Theoretical plates reproducibility

Symmetry reproducibility

Both the silanol activity and hydrofobicity tests are defined e.g. by the Engelhardt test. The hydrofobicity test is based on calculation of the ratio of retention factors $k_{\text{ethylbenzene}}/k_{\text{toluene}}$. The first picture of the Engelhardt test shows a comparison of 2 batches to UHPLC columns for 15 replicates.

Peak shape selectivity is based on a calculation of ratio of $k_{\text{triphenylene}}/k_{\text{o-terpenyl}}$.

Alcaloids – xanthine derivatives

Xanthine alkaloids occur naturally in various plants, such as cocoa, tea and coffee trees. They are commonly used for their effects as mild stimulants. Xanthine alkaloids are monitored in food and drinks, e.g. in chocolate, cocoa powder, and energy drinks.

Analytes	1. Theobromine 2. Caffeine

Non-nutritive sweeteners

Low-calorie sweeteners are commonly used worldwide in the food and drink industry. The list of approved sweeteners varies from country to country. The most common method used to monitor these highly consumed products involves high performance liquid chromatography (HPLC or UHPLC).

Analytes	1. Acesulfame-K (ACS-K) 2. Saccharin (SAC) 3. Aspartame (ASP)

Preservatives in syrup

Sodium and potassium salts of benzoic acid and sorbic acid are well-known food preservatives. The permitted amount in food is strictly regulated with the level depending on the food group. As an example, European regulation EC 1333/2008 sets the rules on food additives: definitions, conditions of use, labelling and procedures.

Preservatives in fats and oils

BHA is used as an antioxidant and preservative in food, animal feed, cosmetics and in rubber and petroleum products. BHT is also used as a preservative and, additionally, as a dietary supplement. BHA is generally recognized as being safe for use in food if the total amount does not exceed 0.02 % fat or oil (FDA). It is suspected of being a human carcinogen.

Organic acids

The identification and quantitative analysis of major organic acids in fruits and vegetables is considered very important for the food and beverage industry. Organic acids play a significant role thanks to their influence on flavour, stability and keeping quality. Organic acids are generated during the aerobic oxidation of carbohydrates, proteins and fats in most biological systems.

Denatonium Benzoate

Denatonium benzoate (CAS Number 3734-33-6) is sold under various brand names, e.g. Denatrol, BITTERANT-b, BITTER+PLUS, Bitrex and Aversion. It is considered the most bitter compound by the whole world, which is why it is used as a denaturant of ethanol to prevent its misuse. This application shows fast isocratic elution to enhance productivity in the laboratory.

HMF in syrup

5-Hydroxymethylfurfural (5-HMF) is formed from fructose or glucose by the heat treatment of food. HMF and its derivatives/metabolites are genotoxic, mutagenic and may be carcinogenic, which is why HMF is analysed in various food matrices, such as in fruit and vegetable products, instant coffee and honey.

Wheat pigments

This application has been developed by ALGATECH, the Institute of Microbiology of the Academy of Sciences, Czech Republic. Chlorophylls and carotenoids are essential cofactors for oxygenic photosynthesis. As the content and stoichiometries of individual pigments are vary significantly in plant leaves under different environmental conditions, the quantification of pigments is important for understanding plant physiology, but also for food-quality monitoring.

Bitter acids in hop

Alpha-bitter acids are precursors of iso- α -bitter acids that are formed during the brewing process. They are present in hops (*Humulus Lupulus L.*) and their content depends on plant species and growing conditions. Iso- α -bitter acids give an appreciable bitter taste to the beer.

Vitamin D in dry blood spot

Vitamin D is a group of steroids that have various effects on the human body and support the immune system. This application shows LC/MS/MS separation of the hydroxylated and non-hydroxylated forms of vitamin D2 and vitamin D3. The amount of their hydroxylated forms determines the total vitamin D in a blood sample. Non-hydroxylated forms of vitamin D2 and vitamin D3 are important for food analysis. The LC/MS/MS chromatogram shows the separation of all the above mentioned analytes.

Pharmaceutical drugs

Tamsulosin hydrochloride is used to treat the symptoms of an enlarged prostate. Tamsulosin hydrochloride is an alpha-blocker which is used to treat the symptoms of an enlarged prostate by relaxing the muscles of the prostate and bladder. Tamsulosin is sold under various trade names, e.g. Flomax, Urimax, Contiflo XL, Mesir LP, Prostanil MR, Tamsin and Fokusin. Veterinary drugs

Tiamulin hydrogen fumarate is a semisynthetic drug with an antibacterial effect. It is used to treat animal diseases, such as swine dysentery (caused by *Brachyspira hyodysenteriae*), swine pneumonia or mycoplasmal arthritis. Tiamulin is also used for the prevention and treatment of chronic respiratory diseases in domestic chickens and turkeys.

Aldehyde/Ketone DNPH derivatives

Carbonyl compounds are part of the group of parameters which are analyzed in the workplace. Occupational hygiene and contract laboratories mostly use the HPLC method for aldehydes and ketones analysis. HPLC separation requires the derivatization with 2,4-dinitrophenyl hydrazine.

Cannabinoids

Cannabinoids have become more and more popular thanks to their health effects and the decriminalisation of their use. Analytical columns that can offer a suitable resolution play an important role. The challenge is to achieve the separation of the critical pair – CBD and CBG.

Product support

Not found the information you require? The ARION® website www.arionchromatography.com serves as your support source.

Application database

The ARION® website has a search engine to find an application based on different keywords, e.g. compound name, trivial name, formula etc.

Product selection guide

The section catalogue offers you text engine as well as sorting the required HPLC columns based on various parameters (column dimensions, particle size, surface chemistry, ...).

Distributor finder

The ARION® website includes a world map with an active finder of your distributor, who will support you with technical and price information.

Certificate download

If you cannot find your column certificate, please contact your local distributor or download the certificate from the **Downloads section**.

ARION® BIO columns have been developed for the protein, polypeptide and peptide characterisation and purification. They are offered with C18 and C4 stationary phases. ARION® C18-BIO phase is intended to separate weakly hydrophobic oligopeptides and peptides up to 50 kDa. ARION® C4-BIO HPLC columns are designed for highly hydrophobic proteins and polypeptides from 50 to 150 kDa.

- Biomolecule separation up to 150 kDa.
- Pre-columns with corresponding media.
- Scale-up to 15 µm.

Lactoferrin in bovine milk

Lactoferrin (LT) is a glycoprotein, which is one of the group of transferrins. It is an iron-binding protein with a mass of 80 kDa. Lactoferrin has microbial properties against many microorganisms (bacteria, viruses and fungi, including parasites). It is one of the non-specific components of the immune system and has anticancer and anti-inflammatory properties.

Lactoferrin is widely represented in various animal fluids, mainly milk, saliva and tears. It is separated from bovine milk to produce this key ingredients of infant formulas. Lactoferrin is also used as a food supplement to support the natural immune system, gut microbiome and healthy skin.

Guard column system

The ARION® Guard System (AGS) is a universal guard system, which can be connected to almost any column hardware on the market. It is easy to use and it offers the shortest retention time shift of analytes in comparison with other major manufacturers. The AGS consists of a Guard holder and Guard cartridge, which is offered with various silica materials according to the stationary phase in the HPLC column used.

- Universal – fits virtually any column on the market.
- The **lowest influence on retention times** compared with other guard systems.
- Small size for easier installation in the column oven.
- **Any orientation** of the cartridge.
- Pressure rating up to **900 bar**.
- Higher cartridge capacity.

ARION® Plus with ARION® Guard System

ARION® Polar with ARION® Guard System

Both chromatograms above show the separation of Uracil, Acetophenone, Toluene and Naphthalene with the ARION® Guard system in Acetonitrile/Water (65:35) at 254 nm. The ARION® Guard system does not affect column performance. It does not show any influence on peak symmetry or column resolution.

A higher sorbent bed (5 × 4 mm ID) offers a **raised capacity** without needing to couple two cartridges together. All this ensures lower running costs.

ASTRA® HPLC columns extend our ARION® and CHROMSHELL® product lines. The ASTRA® has been developed in the Czech Republic to offer an alternate to a broad range of general HPLC columns. ASTRA® brings completely new and unique stationary phase with the polar embedded group to offer a complementary selectivity.

- Unique and high endcapped C18 phases.
- 330 m²/g surface area.
- Multi-modal phase.

Up close

As with all phases developed by Chromservis, ASTRA® HPLC column particles are continuously analysed by SEM. The electron microscope shows the very high quality of ASTRA® 3 and 5µm particles.

ASTRA® particle 5 µm

ASTRA® particle 3 µm

ASTRA® particle 2 µm

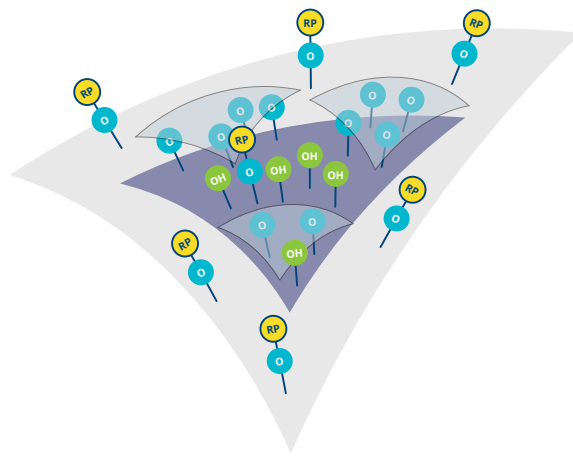

Main particle characteristics:

- Close proximity to a sphere.
- Highly effective endcapping.
- No broken particles.
- Robustness to high pressures.
- Lot-to-lot reproducibility.
- Unique modern embedded phases.

High endcapping

Low endcapping

Beta Blockers

Beta Blockers are also known as beta-adrenergic blocking agents. They are used as a medication that reduces blood pressure.

Clonazepam

Xanax is a benzodiazepine alprazolam-based anxiolytic. Counterfeit Xanax may contain caffeine as a main component, as well as clonazepam and flualprazolam, both of which have a strong sedative effect, are able to cause amnesia, and belong to the group of new psychoactive drugs.

CHROMSHELL®

CHROMSHELL® extends the ARION® phases in the area of core-shell technology (SPP, Superficially-Porous Particles). These columns use an ultra high purity silica of 2.6 µm particles.

- Ultrapure silica with low metal content.
- Maximum pressure 600 bar.
- Temperature stability up to 90 °C.

Chemicals of emerging concern (CECs) in river water

Chemical pollution causes enormous damage to the aquatic environment. The simultaneous determination of pollutants with different physico-chemical properties, such as pesticides, metabolites, personal care products, plastic-related chemicals, is always challenging. The application shows a sensitive LC/MS method for the fast determination of a diverse group of pollutants in river water.

Tween 80

Tween 80 is used to stabilize aqueous solutions with drugs and also as an emulgator in the pharma industry. It is also used as an additive in vaccine production. Currently it is added to Covid19 vaccines.

Column protection

CHROMSHELL® UHPLC columns can be protected by means of a guard system or by using an appropriate guard column filter (in-line filter).

The ARION® Guard System (AGS) is ideal for the protection of CHROMSHELL® UHPLC columns. We recommend it as an easy and less expensive solution in comparison with high pressure guard systems. The AGS can be used with pressures up to **900 bar**. More details about this guard system are on page 50.

Protection can be perfectly ensured by installing a pre-column filter holder with a 0.2µm or 0.5µm frit. This in-line filter can withstand pressures of up to 1375 bar and is easy to use. The filter holder consists of a two-piece body and replaceable filter – a metal frit.

Main features and benefits:

- Minimized dead-volume.
- Easy installation and use.
- Pressure rating up to **1375 bar**.
- Works with 1/16inch column connections from all manufacturers.
- Spare frits with various porosities.

FGS in-line filter

In-line filter selection guide

The FGS in-line filter made from 316 stainless steel is designed to reduce the number of connections compared with standard pre-column filters.

The in-line filter guarantees a very small dead volume thanks to the small bore size (0.15 mm in the body and nut). The total length is 46.5 mm.

Replacement frits

FGS in-line filter holder

Description	Amount	Internal volume	Part number
FGS in-line filter holder for 0.2µm frit (including encased type frit)	1 pc	0.59 µL	FGS-5782-OR0
FGS in-line filter holder for 0.5µm frit (including encased type frit)	1 pc	0.61 µL	FGS-5782-OS0

Replacement frits

Description	Amount	Frit volume	Frit OD	Part number
FGS stainless steel frit for in-line filter 0.2 µm, ID 1.96 mm	5 pcs	0.11 µL	1.96 mm	FGS-5782-SRB
FGS stainless steel frit for in-line filter 0.5 µm, ID 1.96 mm	5 pcs	0.13 µL	1.96 mm	FGS-5782-SSB

Note: The frit consists of stainless steel frit and PEEK ring. The ring has 2.92 mm OD. The frit porosity values are only nominal. They do not reflect maximum pore size of the frit.

LION™ GC columns have arrived to offer you a broad range of stationary phases and flexibility in capillary dimensions. What benefits do these GC capillary columns bring you?

- Strict quality control, each column individually tested.
- Column box includes column test mixture and scoring wafer.
- High flexibility in column dimensions and film thickness.
- Customer specific columns available.

FAME

Fatty acids are carboxylic acids with a long side carbon chain typically found in lipids. These acids differ by the number of carbon atoms in the chain and the number of double bonds in the chain. According to the number of double bonds we distinguish saturated fatty acids (SFA), monounsaturated fatty acids (MUFA) and polyunsaturated fatty acids (PUFA). Trans fatty acids are unsaturated fatty acids in which at least one double bond is in the trans position.

Capillary column LION™ LN-FAME was designed to provide the required polarity by the high-cyano propyl phase (G48). In this application note you can see a fast, robust and reproducible baseline separation of the 37 most common FAMES.

Total Petroleum Hydrocarbons (C10–C40 index)

Total petroleum hydrocarbons index (TPH) is a typical environmental analysis. It has replaced the infrared spectroscopy method using problematic solvents, i.e. Freons. This gas chromatography analysis (GC) monitors hydrocarbons between n-decane and n-tetracontane. These two hydrocarbons are used as the range marker and injection efficiency control. Additionally, the GC method has an important advantage – this can show a type of hydrocarbon contamination (e.g. gasoline, naphtha, motor oil) and weathering status (some n-alkanes disappear during their stay in the environment).

Free Fatty Acids (FFA)

Free fatty acids (FFA) are the most important intermediate of the anaerobic digestion of organic compounds. During methanisation, acetic acid and propionic acid are mainly present. The FFA concentration depends on the substrate composition and the run of the digestion process. FFA are inhibitors of methanisation, but only in an undissociated form in concentrations starting from 40 to 60 mg/L. They are a good marker of digestion quality in biogas stations.

MSPE

MSPE columns enable the quick and effective pretreatment of a sample using different types of membranes with 0.22 micrometer porosity and a suitable sorbent. They are a suitable replacement for 1–3 mL SPE columns, tips filled with sorbent and LL type extraction. With MSPE columns you will save time, use a minimum amount of solvents and perform more sample analyzes than with conventional SPE columns. Another advantage is high accuracy and repeatability due to the precise weighing of the sorbent. It is also no longer necessary to use an SPE manifold; a micro centrifuge is sufficient.

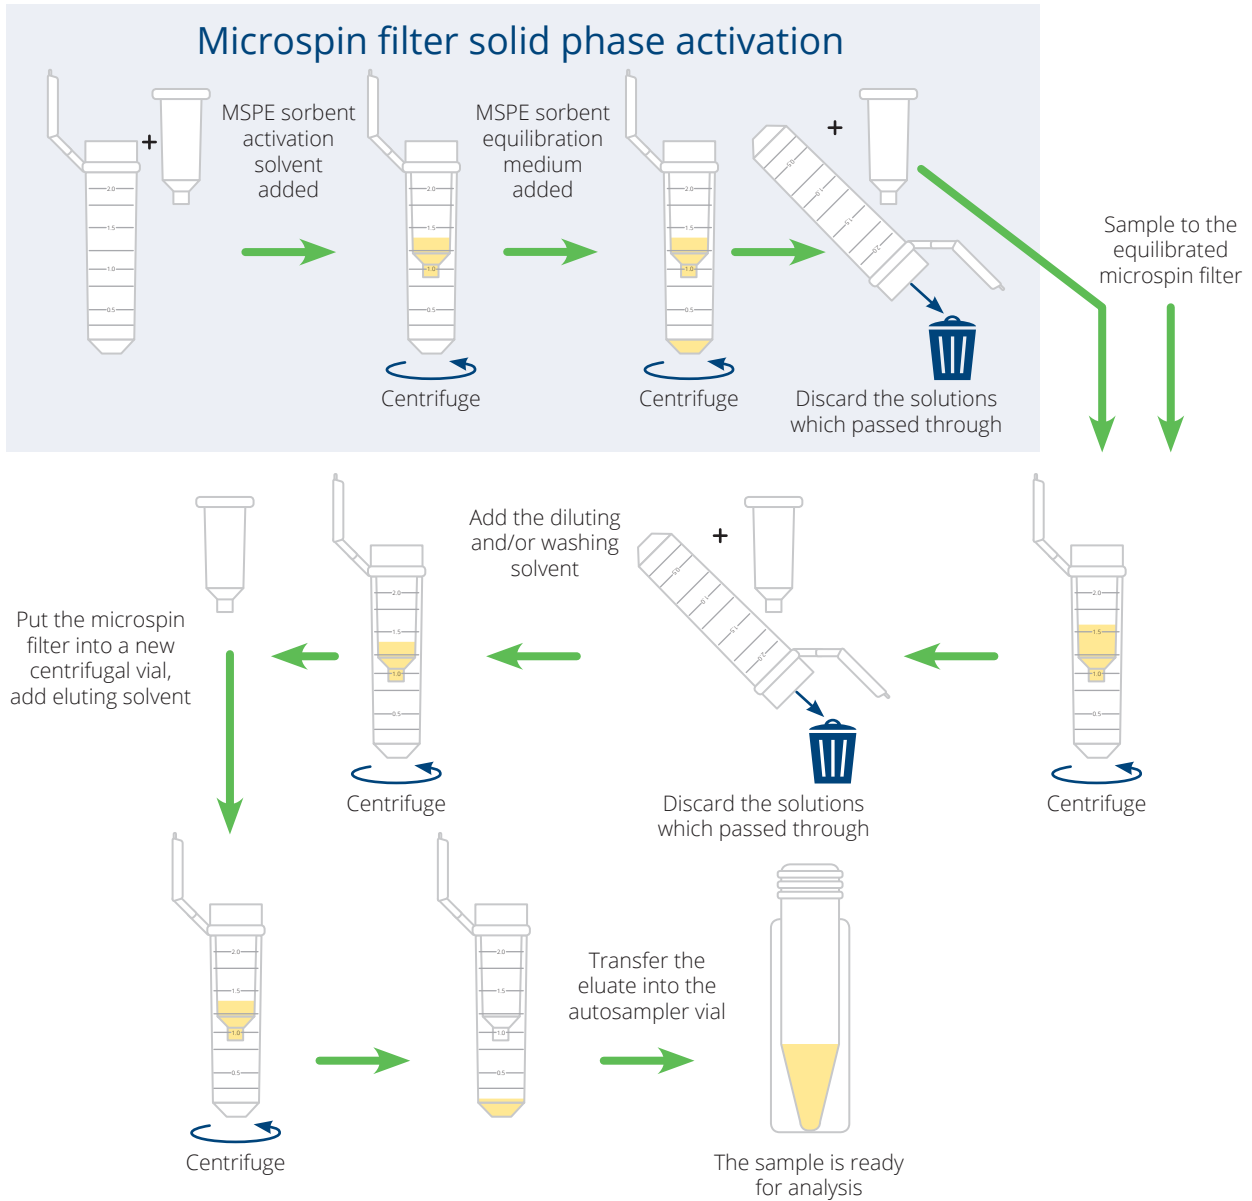

Speed up your sample preparation

- Simple and fast sample preparation.
- 2 in 1 – micro-solid phase extraction and filtration in one step.
- SPE manifold replaced by use of centrifuge.

Prepurification of adipokinetic hormones

Adipokinetic hormones (AKHs) are anti-stress hormones found in insects which maintain the biochemical and physiological homeostasis of the insect body (Kodrík, 2008). AKHs are octa-, nona- or decapeptides with both termini blocked: the N-terminus by a pyroglutamate residue and the C-terminus by an amide. Typically, a specific antibody and ELISA method are used for their quantification in the insect central nervous system and haemolymph. For the latter, prior to executing the ELISA test, several pre-purification steps are required; they also involve a solid phase extraction cartridge. In the test, the AKH from the firebug *Pyrrhocoris apterus* known as Pyrap-AKH was employed. Its structure is: pGlu-Leu-Asn-Phe-Thr-Pro-Asn-Trp-NH₂ (Kodrík et al., 2000).

SPE columns

SpeExtra™ is a new range of SPE columns for your sample preparation.

Florisil® and HLB columns are suitable for use in the environmental and toxicology area. The SpeExtra™ HLB SPE column is based on a modified polymer of 100Å pore size. It offers a high surface area of >825 m²/g. The working pH range is from pH 1 to pH 13. The loading capacity is 20 %. It has been developed to clean a broad range of hydrophobic/hydrophilic compounds across various matrixes (plasma, urine, oil, water etc.).

Sample preparation kit

MetAmino® kits offer an easy sample preparation method for your LC/MS or GC/MS analysis. MetAmino® kits include derivatization reagents and all clean-up accessories to prepare your sample for injection. They eliminate time consuming sample preparation procedures.

The new clean-up procedure uses a special material as the end-step. The other advantage is that the derivatization procedure enables the extension of the analyte list. Contact us for further details.

- 76 amino acids, polyamines, biogen amines and coenzymes in 25 minutes (sample preparation and analysis time).
- Easy sample preparation.
- Unique clean-up step.
- LC/MS and GC/MS kit.
- NIST library for GC/MS available.
- Possible extension to other analytes on request.

Metabolite sample preparation kit (CF)

- Derivatization reagents.
- Derivatization centrifugal filters (set of 100/400 pcs).
- 2mL screw top vials (set of 100/400 pcs).
- Micro tube rack.
- LC/MS or GC/MS column.
- Sample preparation manual.

CENTRIFUGAL FILTERS

CENTRIFUGAL FILTERS

Centrifugal filters Nano-Spin and Micro-Spin (including Micro/Nano-Spin tube) with a porosity of 0.2 μm and 0.45 μm are suitable for sample purification, pre-filtration, removal of particles and cleaning of impurities in samples using membranes (Nylon, PTFE, PVDF, PE, CA, NC, RC).

CENTRIFUGAL FILTERS

CENTRIFUGAL FILTERS

Centrifugal filters Midi-Spin and Maxi-Spin (including spin tube) with a porosity of 0.2 μm and 0.45 μm are suitable for sample purification, pre-filtration, removal of particles and cleaning of impurities in samples using membranes (Nylon, PTFE, PVDF, PE, CA, NC, RC).

CHS FILTERPURE

SYRINGE FILTERS

CHS Filterpure syringe filters are suitable for filtering solutions and solvent solutions, where it is necessary to have a low content of extractable substances. The membranes (Nylon, PTFE, PVDF, MCE, PES) have good chemical resistance and high strength.
